Testing history

History Lean + Six Sigma

- Toyota Production System - Quicker and more efficient (Lean)
- 7 wastes:
 - Overproduction
 - Waiting
 - Transporting
 - Inappropriate processing
 - Unnecessary inventory
 - Unnecessary / excess motion
 - Defects
- (Lean) Six Sigma - Higher quality and smarter
- 4 key elements ¹⁾ :
 - Delight the customer
 - Improve processes
 - Teamwork
 - Data and facts

¹⁾ George, Mike, Rowlands, Dave, and Kastle, Bill. What is Lean Six Sigma? New York. 2004.

Comparing Lean, Six Sigma and Test Management (1)

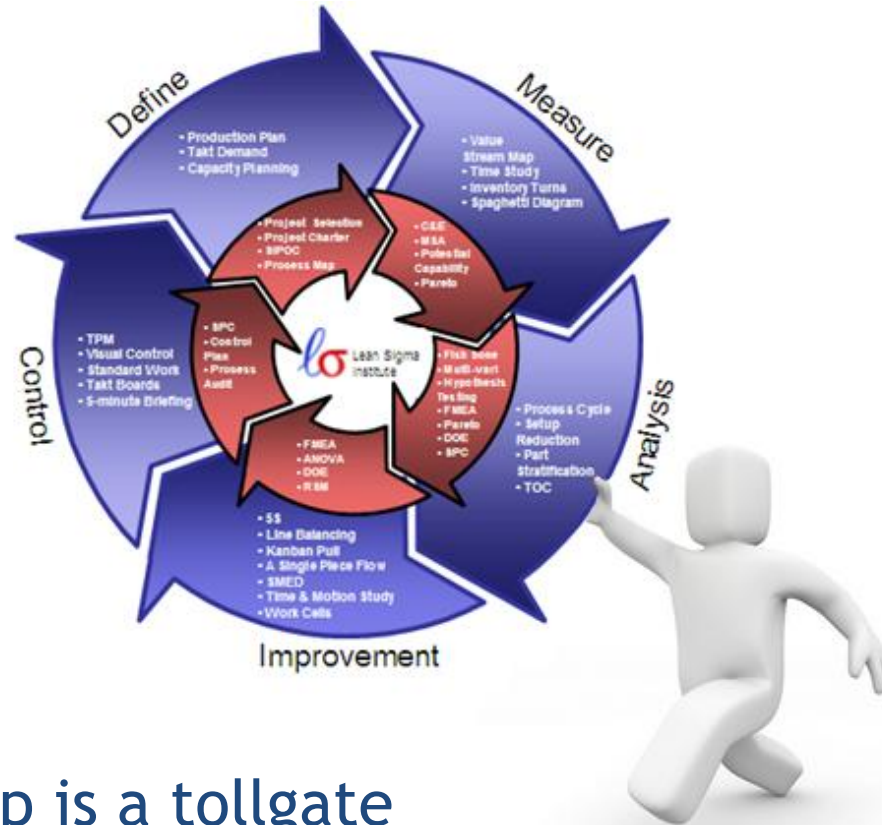

2)	Lean (Time + Money)	Six Sigma (Quality)	Test Management (Time, Money + Quality)
Goal	Create flow and eliminate waste	Improve process capability and eliminate variation	Manage the test process to measure the quality of the test object, balanced within time and budget
Application	Primarily manufacturing processes	All business processes	All business processes
Approach	Teaching principles and "cookbook style" implementation based on best practice	Teaching a generic problem-solving approach relying on statistics	Teaching principles and "cookbook style" implementation based on best practice. Test improvement based on metrics.
Project selection	Driven by Value Stream Map	Various approaches	Driven by prioritized product risks

Comparing Lean, Six Sigma and Test Management (2)

	Lean (Time + Money)	Six Sigma (Quality)	Test Management (Time, Money + Quality)
Length of projects	1 week to 3 months	2 to 6 months	2 to 6 months
Infrastructure	Mostly ad-hoc, no or little formal training	Dedicated resources, broad-based training	Dedicated resources, broad-based training
Training	Learning by doing	Learning by doing	Learning by doing

Roadmap to Lean Test Management

- DMAIC:
 - Define
 - Measure
 - Analyze
 - Improve
 - Control

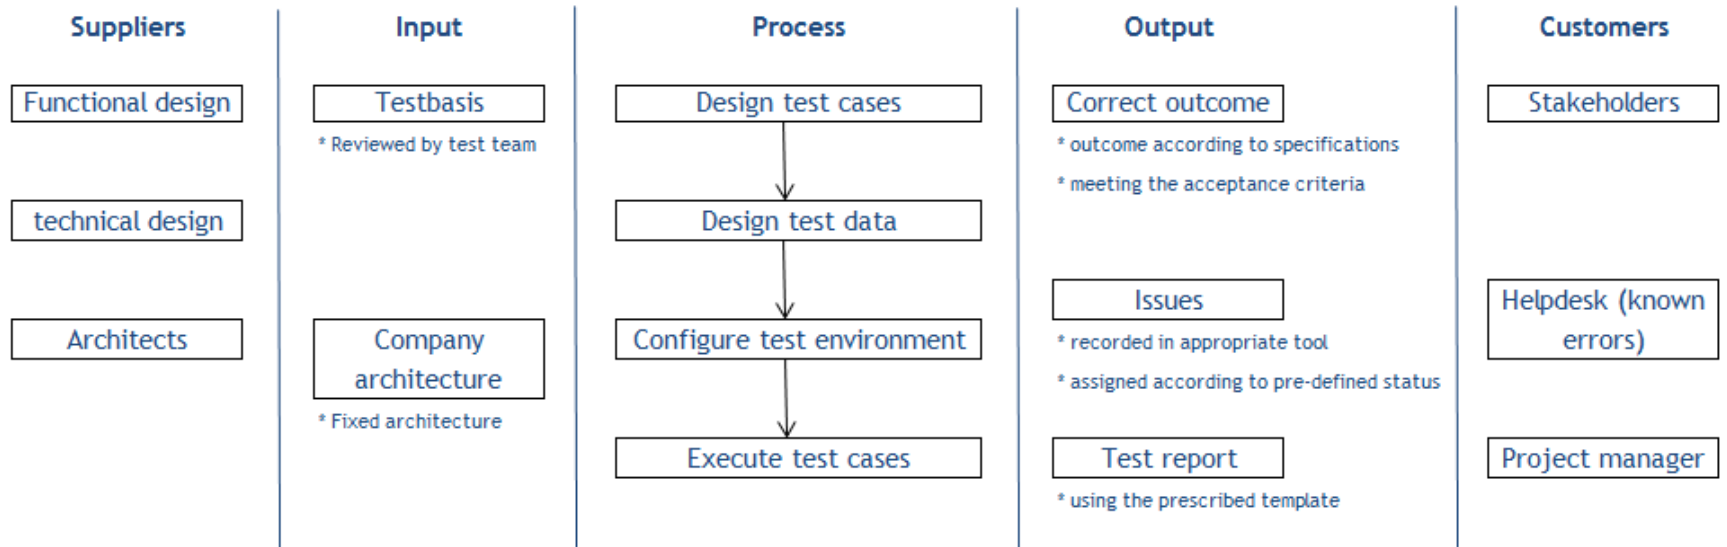

- Between every step is a tollgate

- Purpose:
To agree on what the project is.
- Example tools:
SIPOC
Value Stream Map

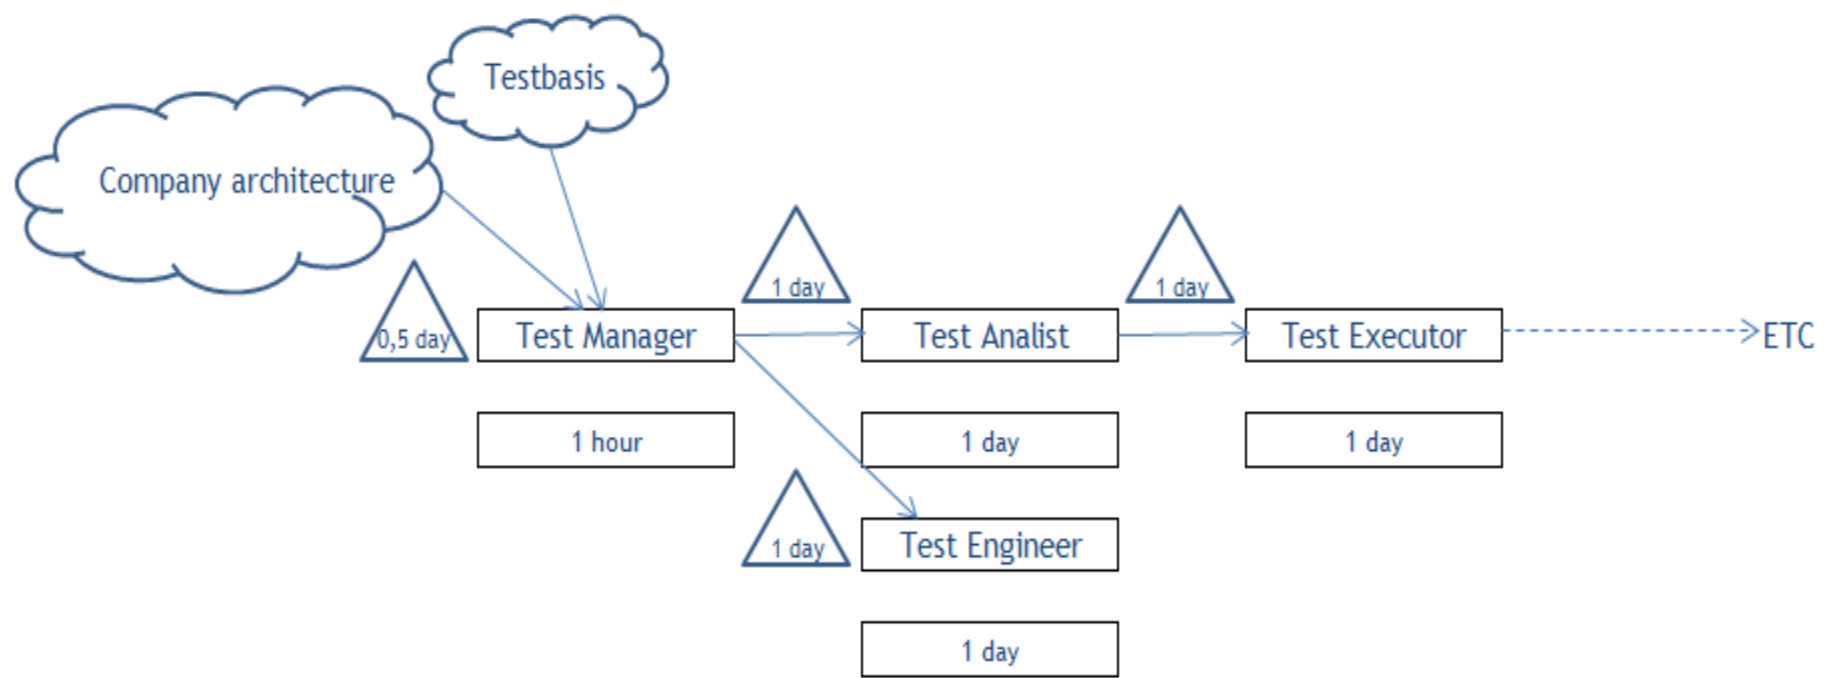

Define - example SIPOC

* Critical-To-Quality indicators (CTQ)

Define - Example Value Stream Map

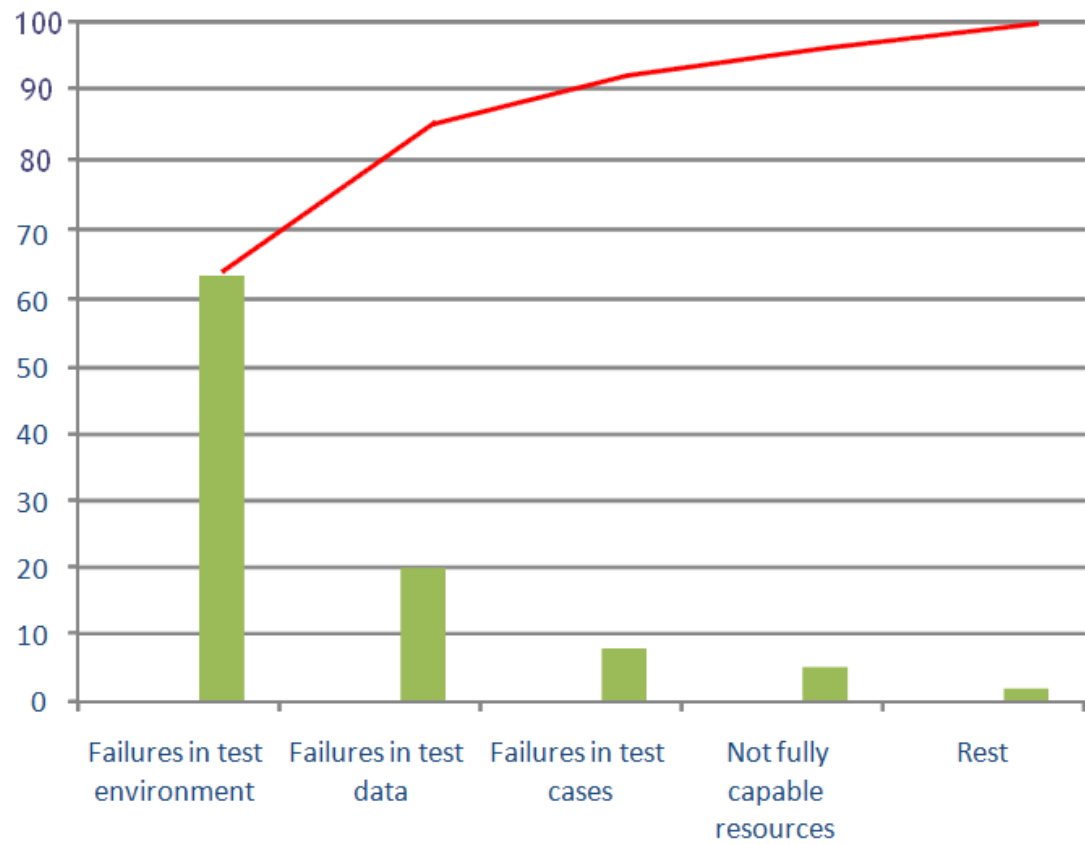

Measure - theory

- Purpose:
Evaluate the existing measurement system, observe the process, gather data, and map the process in more depth.
- Example tool:
Pareto chart

Measure - Example Pareto chart

Pareto chart for long waiting hours during test execution

- Purpose:
Use collected data to confirm the source of delays, waste, and poor quality.
- Example tools:
5 Why's
Ishikawa diagram

Analyze - Example 5 Why's

Problem Statement:
During test execution there
are long waiting hours.

1. Why are there long waiting hours during test execution?

2. Why are there failures in the test environment?

3. Why do you often have the wrong version?

4. Why does someone install the wrong version?

5. Why don't you have proper version control?

1. Because often there are failures in the test environment

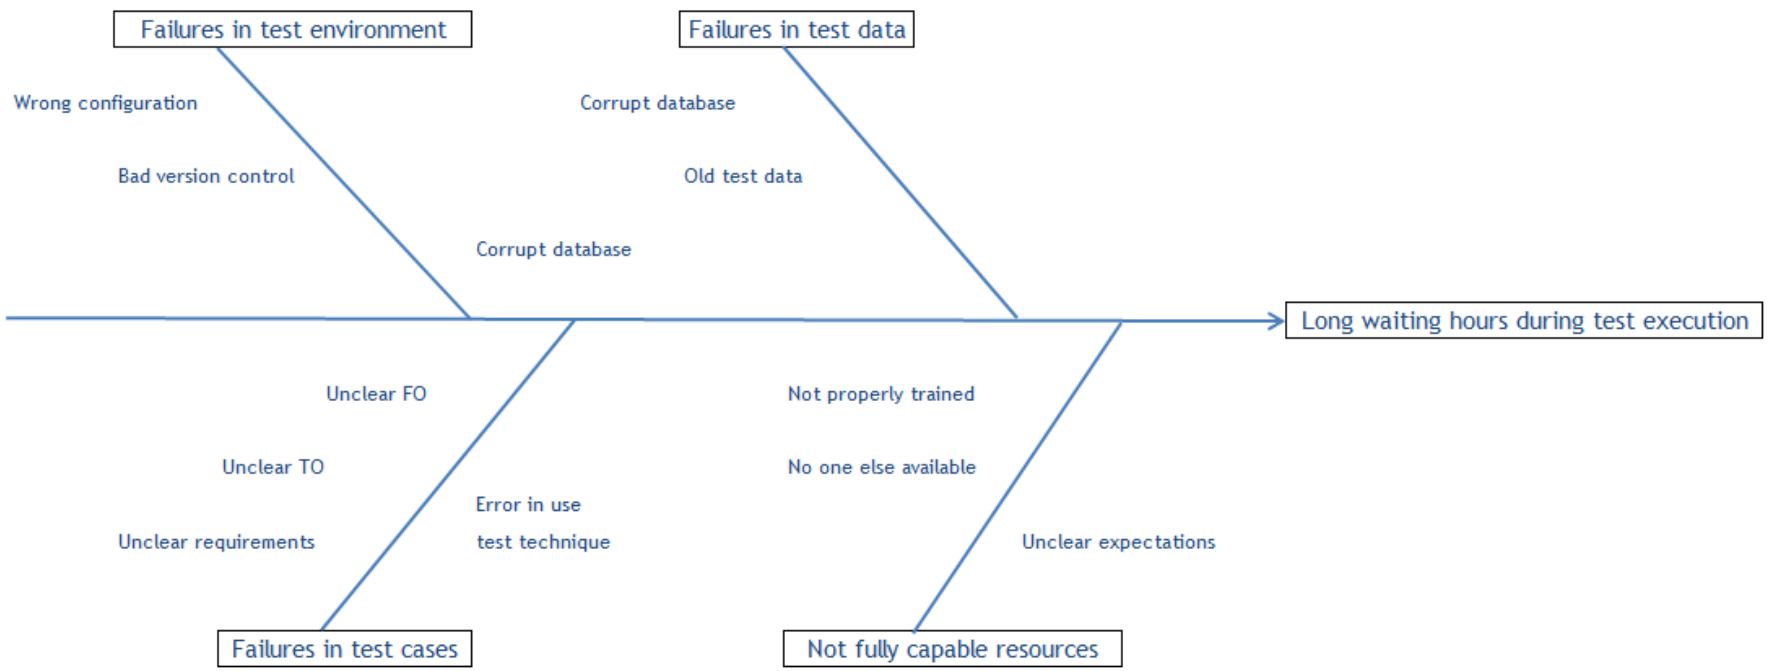

2. Because we often seem to have the wrong version of the test object.

3. Because someone installed the wrong version.

4. Because we don't have proper version control.

5. Because we never got around to it, but it seems time to do it now.

Analyze - Example Ishikawa diagram

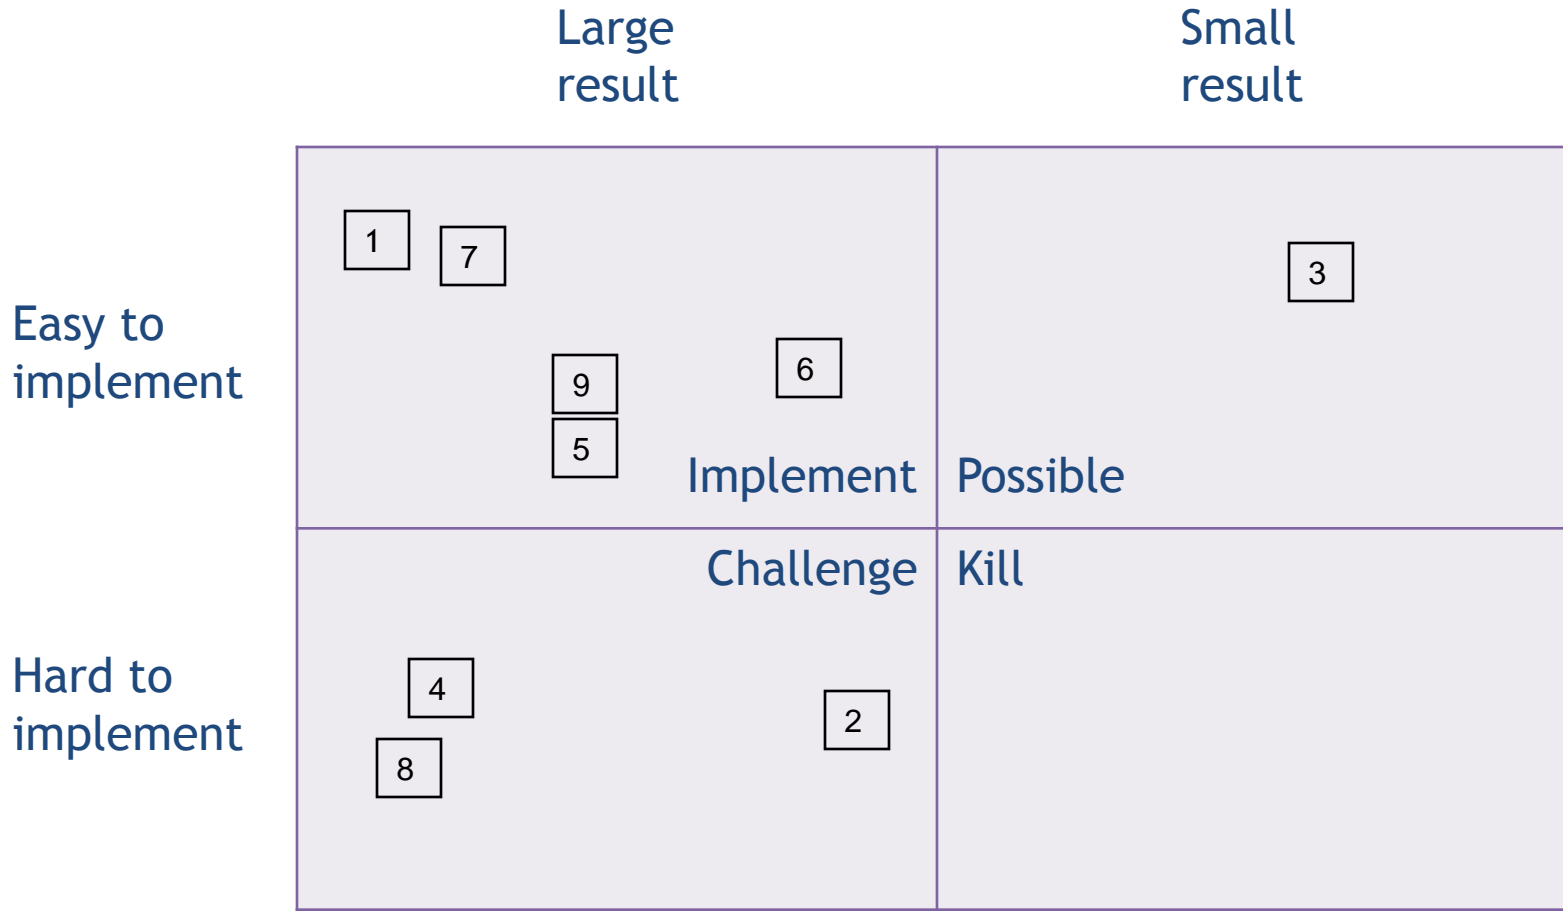

Improve - theory

- Purpose:
To make changes in a process that eliminate defects, waste, cost, etc., which are linked to the customer need identified in the Define phase.
- Example tool:
Pick chart

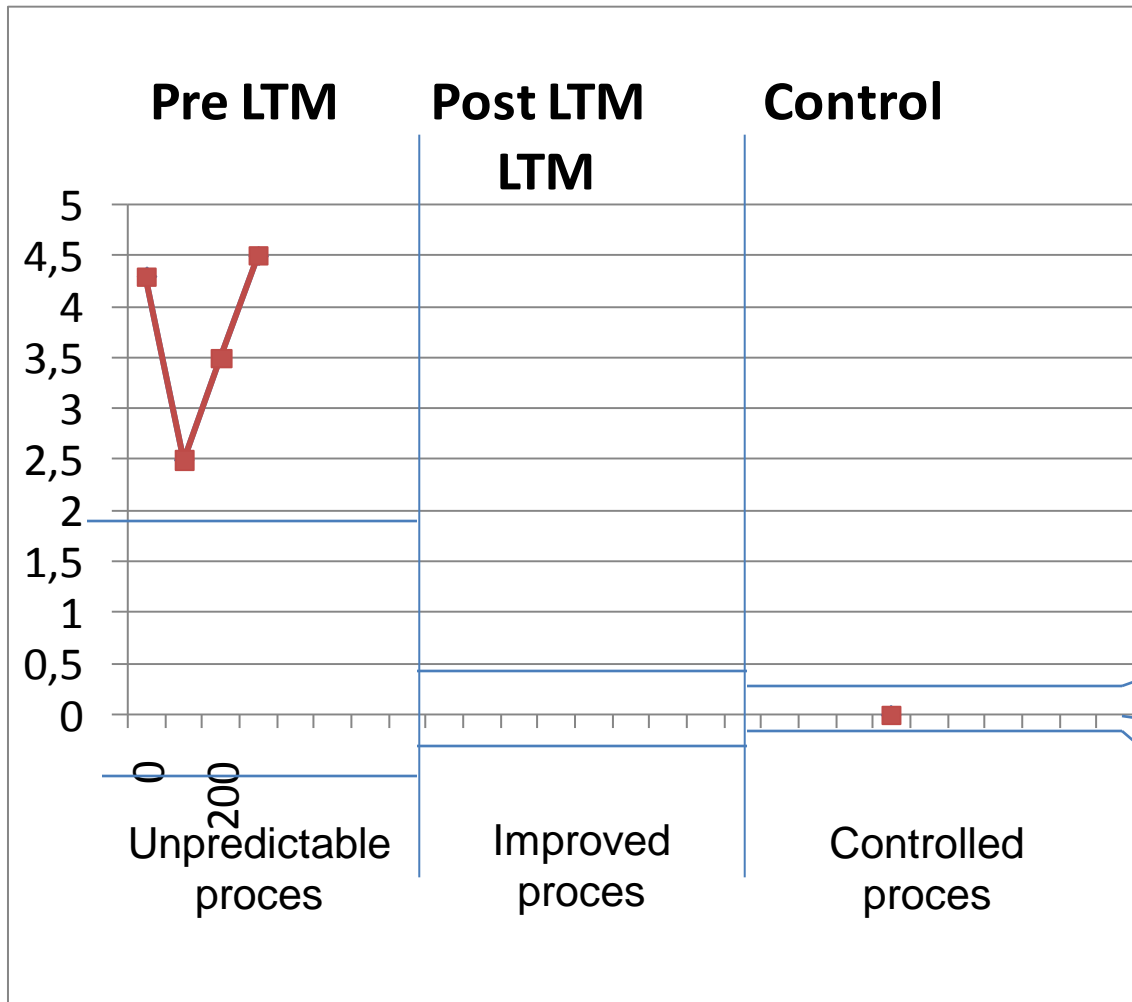

Improve - Example Pick chart

- Purpose:
To make sure that any gains a team makes last.
- Example tool:
Control chart

Control - Example Control chart

Gain	Sigma level
30,85%	1
69,15%	2
93,32%	3
99,38%	4
99,977%	5
99,99966%	6

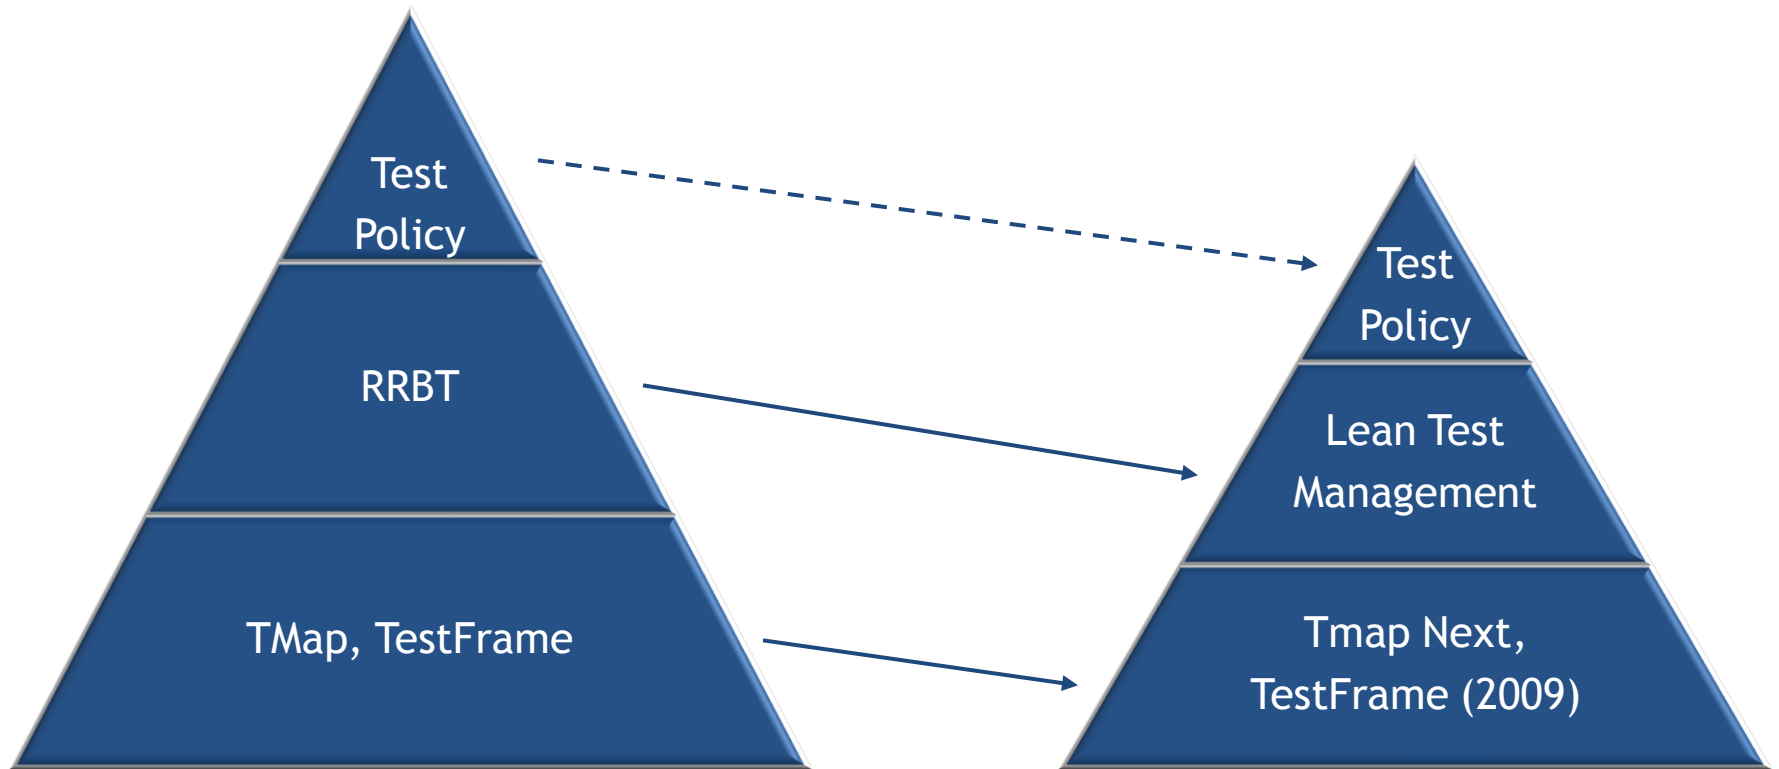

Upper limit=2,3000

Average=2,1740

Lower limit=1,9000
